PARTICIPANTS

The U.S. Department of Energy Office of Science leads the United States' contributions to the international ITER project, which will demonstrate the scientific and technological feasibility of fusion energy. The seven ITER members, representing 35 nations, are the United States, European Union (host), Japan, Korea, India, China, and Russia. Most US ITER funding is spent within the U.S. for the research, development, design, and fabrication of components by U.S. industry, universities, and laboratories that will ultimately be shipped to the ITER site for assembly and research operations.
